

A scatter plot comparing the performance of an 'Original Model' (red dots) and an 'Augmented Model' (yellow dots) across a range of 'Real Values' on a logarithmic scale. The x-axis, labeled 'Real Values', ranges from 10^{-4} to 10^0 . The y-axis, representing a performance metric, ranges from 10^{-2} to 10^1 . A solid red line indicates the identity line where predicted values equal real values. The 'Original Model' data points are clustered around the identity line for real values between 10^{-3} and 10^{-2} , with one outlier at a real value of approximately 0.4. The 'Augmented Model' data points are more scattered, generally following the identity line but showing more deviation at lower real values and one outlier at a real value of approximately 0.008.

| Model | Real Value (x) | Performance Metric (y) |
|-----------------|----------------------|------------------------|
| Original Model | 10^{-3} | 10^{-2} |
| Original Model | 1.2×10^{-3} | 1.5×10^{-2} |
| Original Model | 1.5×10^{-3} | 2×10^{-2} |
| Original Model | 2×10^{-3} | 2.5×10^{-2} |
| Original Model | 3×10^{-3} | 3×10^{-2} |
| Original Model | 4×10^{-3} | 4×10^{-2} |
| Original Model | 5×10^{-3} | 5×10^{-2} |
| Original Model | 8×10^{-3} | 8×10^{-2} |
| Original Model | 10^{-2} | 10^{-1} |
| Original Model | 0.4 | 4 |
| Augmented Model | 10^{-3} | 1.2×10^{-2} |
| Augmented Model | 1.2×10^{-3} | 1.8×10^{-2} |
| Augmented Model | 1.5×10^{-3} | 2.2×10^{-2} |
| Augmented Model | 2×10^{-3} | 2.8×10^{-2} |
| Augmented Model | 3×10^{-3} | 3.5×10^{-2} |
| Augmented Model | 4×10^{-3} | 4.5×10^{-2} |
| Augmented Model | 8×10^{-3} | 8×10^{-2} |
| Augmented Model | 10^{-2} | 10^{-1} |
| Augmented Model | 8×10^{-3} | 2×10^{-2} |
| Augmented Model | 4×10^{-3} | 1.5×10^{-2} |
